

At LpsChain, we are transforming secure data management by integrating all your storage solutions into a single, robust and efficient platform.

Connect and control all types of storage from one user-friendly interface. Link various storages effortlessly, ensuring smooth and secure data flow. Every file, every storage, fully encrypted, creating an impenetrable digital vault that protects your sensitive information.

SCALABLE VAULT FOR DATA SECURITY

- ◆ All processes are designed in accordance with global data protection laws.
- ◆ Every action is securely logged on blockchain - immutable, transparent, and fully traceable.
- ◆ Encrypted video/audio calls; no third-party access, fast and seamless performance, user-friendly interface.
- ◆ Work without borders. LpsChain turns any device into your secure office.

“ *Your data deserves more than just storage; it deserves complete protection and effortless management.*

LpsChain

Trusted, Modular and Collaborative Data Management.

Built on zero-trust, LpsChain offers secure and reliable data operations—even in environments where trust cannot be guaranteed.

Next-gen security In your pocket

LpsChain

LpsChain is a blockchain-based solution built to support secure, fast, and collaborative data workflows across organizations

LPS Communicator

LPS Communicator is a desktop-based, fully encrypted platform for secure team communication. It supports real-time messaging, file sharing, and seamless team interaction—without compromising data privacy or needing extra software.

LPS Talk

LPS Talk is a mobile messaging app built with post-quantum encryption, ensuring your messages remain secure—even against future quantum computing threats.
